

The Bed Bug Problem

Bed bugs have once again become a BIG problem across the country. These little bugs create HUGE issues for hotels, apartment and condominium complexes, hospitals, dormitories, etc.

Bed bug problems have grown due to a developed resistance from residual treatments and an increase in international travel. Bed bugs hitchhike on clothing and in luggage and can travel anywhere a host takes them.

This means any place a human visits is a potential living area for bed bugs, including airplanes, buses, movie theatres and even your own home.

ThermEx™
Heat Remediation Solution

Introducing the ThermEx Heat Remediation Solution

The ThermEx Heat Remediation Solution is a state-of-the-art bed bug program that combines the Pest Management Development and Training Expertise of Massey Services with the Engineering and Design Capabilities of Chromalox.

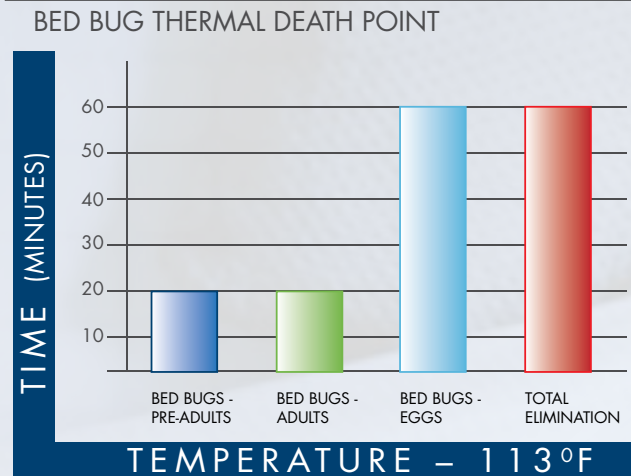

This innovative program will enable you to provide *fast and effective* bed bug treatments for your customers. We'll provide you with the heat remediation equipment, technical support, bed bug elimination training and ongoing pest management support necessary to generate profitable results and customer satisfaction.

ThermEx Heat Remediation Solution Includes:*

- State of the Art Equipment
 - > Two Forced Air Heaters
 - > A Data Recorder
 - > A ThermEx Trailer for Easy Transportation of your Equipment
 - > Power Distribution Box
- Technical Support
- Bed Bug Elimination Training and Certification
 - > Classroom AND Field Training
 - > Training and Technical Manual
- 24 Hour Hotline
- Onsite Support

*Some material listed above only included in certain packages.

How Effective is Heat Treatment?

Why Heat vs. Residual Product?

- Bed bugs may hide in any crack or crevice in a guest room. Therefore, it is difficult to apply a residual product that affects the entire bed bug population.
- Not all bed bugs are susceptible to residual products because many strains have become resistant to the products available.
- Residuals do not affect bed bug eggs.
- A residual treatment typically requires follow up on a weekly basis for up to 12 weeks or more.

Why Choose the ThermEx Heat Remediation Solution?

FAST & CONVENIENT

- Rooms are typically unavailable for only 48 hours – not weeks like other programs.
- Treatment is isolated to the room being treated so it will not affect other rooms!
- Our equipment plugs directly into the wall so there are no wires exposed outside the room.

EFFECTIVE

- There have been hundreds of applications and years of proven success using the ThermEx Heat Remediation Solution.
- Eliminates all stages of bed bug population – from eggs to adults.
- Treatments will not damage the contents in the infested room.

ECONOMICAL

- Training that will demonstrate how to produce profitable bed bug solutions for your customers.
- Expand your service offerings to offer your customers a bed bug elimination solution.

EASY

- Our training makes it easy to get started... and easy to obtain support if needed.
